

A Report on
The 2013 Behavioral Health Survey
Commonwealth of the Northern Mariana Islands

Commissioned by the
Community Guidance Center
Department of Public Health
Commonwealth Health Care Corporation

Conducted by
Wil Maui, Consultant
and
The Central Statistics Division
The CNMI Department of Commerce

Prepared by
Wil Maui dba DataTalks
Saipan
December 30, 2013

FOREWORD AND ACKNOWLEDGEMENT

The Community Guidance Center (CGC) under the Commonwealth HealthCare Corporation (CHCC) and the CNMI Department of Commerce's Central Statistics Division (DOC) are pleased to publish the results of the 2013 CNMI Behavioral Health Survey (CBHS). This report fulfills the intent and purpose of the Memorandum of Understanding (MOU) between the CHCC and the DOC, dated February 25, 2013. By this MOU, funds were made available from CHCC to Commerce to collect data on behavioral health in the Commonwealth. This report provides important baseline data for the various public health programs in the Commonwealth and will be analyzed further for additional information for program use and for grant management.

Many individuals, both from the CHCC and Commerce, contributed to the completion of this important survey:

From DOC, the Central Statistics Division (CSD) Director, Alfonis M. Sound, managed and coordinated the general operation of the project. Justin H. Andrew supervised the survey field work, coding, and data entry. Tom Torres assisted in the technical aspects of the survey. Brenda Rideb and Linda Cabrera assisted in the administrative work and other capacity for the survey. Resident Directors, Jose P. Cruz of Tinian, Eusebio (Bill) Hocog of Rota and their staff coordinated the operation in their respective areas.

From the CHCC-CGC, Mr. Glenn H. Manglona, State Epidemiological Workgroup Chairperson/Statistician, members of the SEW group (Saipan, Rota and Tinian), Mrs. Reyna M. Saures, Director of CGC's Behavioral Health Division and staff.

In addition, we also recognize the contribution of the enumerators and office clerks CSD hired, on a limited term basis, to collect, review, code, enter, reconcile, and clean the CBHS data for processing.

Besides our staff mentioned above, we would also like to recognize the contribution of those that we may have failed to name and most especially to the 1,284 households throughout the CNMI who willingly participated in this round of important Survey.

Last but not least, we would like to thank Wil Maui of Data Talks who served as a consultant for this 2013 CBHS and for the preparation of this report.

SIXTO K. IGISOMAR
Secretary
Department of Commerce

ESTHER L. MUNA
Chief Executive Officer
CHCC

Q.01 During the past 30 days, between June 1st and June 30th, report on how many days you used any of the following substances: Cigarettes	33
Q.02 During the past 30 days, between June 1st and June 30th, report on how many days you used any of the following substances: Other Tobacco Products	35
Q.03 During the past 30 days, between June 1st and June 30th, report on how many days you used any of the following substances: Betelnut with Tobacco.....	37
Q.04 During the past 30 days, between June 1st and June 30th, report on how many days you used any of the following substances: Alcoholic beverages	39
Q.05 During the past 30 days, between June 1st and June 30th, report on how many days you used any of the following substances: Marijuana.....	41
Q.10 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Cigarettes	51
Q.11 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Betelnut with Tobacco.....	53
Q.12 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Alcohol.....	55
Q.13 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Marijuana.....	57
Q.14 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Heroin, crack, or cocaine methamphetamine	59
Q.15 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Hallucinogens	61
Q.16 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Inhalants or sniffed substances.....	63

Q.17 Think back over your entire lifetime and try to remember whether you have EVER used any of the following substances. If so, what was your age the FIRST TIME you used the substance: Prescription drugs without doctor's orders	65
Q.18 When they smoke one or more packs of CIGARETTES per day?	67
Q.19 When they have five or more ALCOHOLIC BEVERAGES once or twice a week?	69
Q.20 When they smoke MARIJUANA once or twice a week?	71
Q.21 When they use Other Tobacco Products: such as snuff, chewing tobacco, and smoking tobacco from a pipe?.....	73
Q.22a Betelnut with Tobacco: Includes cigarette stick, twist, or dried tobacco.	75
Q.22b Betelnut with Tobacco at least 12 times a day: Includes cigarette stick, twist, or dried tobacco.....	77
Q.23 When they smoke the following substances Heroin, crack or cocaine, methamphetamine	79
Q.24 When they smoke the following substances Hallucinogens	81
Q.25 How do you feel about someone smoking one or more packs of cigarettes a day?.....	83
Q.26 How do you think your family members, relatives and close friends feel about smoking one or more cigarettes a day?	85
Q.27 How do you feel about someone trying Marijuana or Hashish?	87
Q.28 How do you feel about someone using Marijuana or Hashish once a month or more?	89
Q.29 How do you feel about someone your age having one or two alcoholic beverages nearly every day?.....	91
Q.30 Would you be more or less likely to want to work for an employer that test its employees for drug or alcohol use on a random basis?	93
Q.31a During the past 12 months, how many times have you talked with your own children about the dangers or problems associated with the use of Tobacco, Alcohol, or Other Drugs?	95
Q.31b During the past 12 months, how many times have you talked with children in your household (other than your own) about the dangers or problems associated with the use of Tobacco, Alcohol, or Other Drugs?	97
Q.32 During the past 12 months, have you driven a vehicle while you were under the influence of alcohol?	99
Q.33 During the past 12 months, have you driven passengers in a vehicle while you were under the influence of alcohol?	101
Q.34 During the past 12 months, have you been a passenger in a vehicle with a driver under the influence of alcohol?	103
Q.35 During the past 12 months, have you driven a vehicle while you were under the influence of any drugs?	105
Q.36 During the past 12 months, have you driven passengers in a vehicle while you were under the influence of drugs?	107
Q.37 During the past 12 months, have you been a passenger in a vehicle with a driver under the influence of drugs?	109

Q.38 During the past 12 months, have you driven a vehicle while you were under the influence of alcohol and drugs concurrently?	111
Q.39 During the past 12 months, have you driven passengers in a vehicle while you were under the influence of alcohol and drugs concurrently?	113
Q.40 During the past 12 months, have you been a passenger in a vehicle with a driver under the influence of alcohol and drugs concurrently?	115
Q.41 About how often during the past 30 days did you feel nervous?	117
Q.42 During the past 30 days, about how often did you feel hopeless?	119
Q.43 During the past 30 days, about how often do you feel restless or fidgety?.....	121
Q.44 During the past 30 days, about how often do you feel so depressed that nothing could cheer you up?.....	123
Q.45 During the past 30 days, about how often do you feel that everything was an effort?	125
Q.46 During the past 30 days, for about how many days did a mental health condition or emotional problem keep you from doing your work or other usual activities?	127
Q.47a Are you now taking medicine or receiving treatment from a doctor or other health professional for any type of mental health condition or emotional problem?	129
Q.47b Are you now taking medicine or receiving treatment from a local traditional healer for any type of mental health condition or emotional problem?	131
Q.48. Have you ever thought about committing suicide?"	133
Q.49 Treatment can help people with mental illness lead normal lives	135
Q.50 People are generally caring and sympathetic to people with mental illness.	136
Q.51 Are you aware there is a CNMI law (P.L 16-46) that prohibits smoking in public or enclosed place?	137
Q.52 Do you support the smoke free law (P.L. 16-46)?	139
Q.53. Have you ever served in the United States Armed Forces?	140
APPENDIX A: The 2013 CNMI Behavioral Health Survey Questionnaire.....	142

The Report on the 2013 Behavioral Health Survey Commonwealth of the Northern Mariana Islands

I. INTRODUCTION

THE PURPOSE OF THE SURVEY

The 2013 Commonwealth of the Northern Mariana Islands Behavioral Health Survey (CBHS) is the second round of the same behavioral health survey first conducted in the Commonwealth in 2011. Like the first round, the purpose of the 2013 CBHS was to collect cross-sectional data to produce statistical descriptions of behavioral health topics—the use of and attitudes toward the use of alcohol, tobacco, and other drugs (ATOD) and mental health and stigma—of the adult population in the Commonwealth.

The dataset from this 2013 Survey will be used by the Community Guidance Center (CGC), and other health officials, to produce the 2013 behavioral health National Outcomes Measures (NOMS) for the Commonwealth. The dataset will enable comparison of the CNMI NOMS with other places as well as comparison between 2013 and 2011 within the CNMI. The resulting measures will also be used in various program evaluations and to guide programming changes.

THE HEALTH TOPICS COVERED IN THE CBHS AND THE SURVEY INSTRUMENT

The general topic areas covered in the CNMI 2013 CBHS are the same ones covered in the 2011 CBHS which include:

1. Tobacco: cigarettes and other tobacco products
2. Betel nut with tobacco
3. Alcohol
4. Marijuana
5. Heroin, crack or cocaine, and methamphetamine
6. Hallucinogens
7. Inhalants
8. Prescription Drugs
9. Mental Illness and Stigma

THE TARGET POPULATION AND GEOGRAPHY OF THE SURVEY

The target population of the 2013 CBHS, like in the 2011, included the entire CNMI adult population. Specifically, it included all 18 years and older persons in the islands of Saipan, Tinian and Rota. However, the Survey excluded persons living in company provided housing quarters with 10 or more persons and those who were in mental and correctional institutions. Like the 2011 CBHS, the 2013 CBHS did not cover the Northern Islands. In addition, the Survey also aimed to profile possible differences among village groups within each of the three islands¹.

¹ For details on the CNMI geography used in this Survey, please see Appendix B: *The CNMI Sampling Universe at the Central Statistics Division, A Report on the 2011 Behavioral Health Survey, Commonwealth of the Northern Mariana Islands*. August 25, 2011.

THE SURVEY TIMELINE

The data collection for the 2013 CBHS was completed in a three and half-month's period, starting on July 19, 2013 and ended on October 31, 2013. Data coding began the third week after the Survey field work began. Data entry began August 12, 2013 and continued until November 6, 2013. Data reconciliation and cleaning took place from November 7th through December 3rd. Preliminary data processing and tabulation began on November 18, 2013; the final tabulation was completed on December 9, 2013. The first draft of descriptive statistics was distributed on November 22, 2013. The first comprehensive draft of the Survey Report was distributed on December 17, 2013.

II. THE SURVEY**THE SAMPLE FOR THE 2013 CBHS**

The 2013 CBHS used the same sample design as the 2011 CBHS: a stratified random sampling with proportion to size and with minimum technique with Island being the first strata and Village Group, the second strata. The same sampling universe was used in both of these surveys as well. The goal of the sampling for the Survey was to produce the best statistical estimates on the behavioral health related topics for the entire household population in the CNMI, by Island, and by Village Group.

To arrive at the 2013 sample, the CNMI sampling universe was first separated into two groups: 1) household housing units' (HHUs) type and 2) group quarter (GQs) units' type. For this Survey, GQ type units were excluded. The household housing units group was further separated into occupied and vacant units. From all occupied HHUs, a two-stage stratified random sampling with minimum technique was used in selecting a sample from all occupied HHUs with Island as the first strata and Village Group as the second strata. A minimum of 50 units was used in drawing the sample.

A total of 1,268 housing units were selected from Saipan, 202 from Tinian, and 210 from Rota. In addition, five additional housing units were randomly selected from each of the Assignment Areas (AAs) in the sample and used as substitutes for situations where a housing unit was no longer occupied, demolished, converted into a business establishment, a householder refused to complete the survey, or for other reasons. The substitution was done to ensure that enough household data from village groups throughout the CNMI was collected to adequately describe the population's health characteristics.

THE SURVEY INSTRUMENT

The 2013 used the 2011 CHBS questionnaire with two additional new questions: one on suicide and the other on military. The individual questions on each of the major topics covered in the Survey were grouped into 15 major categories with 53 questions, three of which had two sub-questions for a total of 58 questions. The questionnaire used in the CBHS is attached as Appendix A, please this appendix for detail.

THE ADMINISTRATION OF THE SURVEY

The 2013 CBHS is the fourth survey of its kind carried out by CSD for Department of Public Health (DPH) under a similar memorandum of agreements with Wil Maui serving as consultant in charge of planning, conducting, and reporting on the surveys. The Central Statistics Division hired the survey enumerators and clerks as temporary government worker who were based within CSD. Wil Maui, as the consultant, planned, implemented, and this report on the 2013 CBHS based on the terms of the MOA between CHCC and Commerce. Under the law, PL 7-35, enacted in 1990, CSD is the CNMI Government Office that is empowered with authority to collect data, among other things, in the CNMI. The CSD has been

conducting community surveys in the CNMI since the 1990s, some of which were conducted on behalf of the DPH, CHCC. Wil Maui, dba DataTalks is a former employee of CSD who developed surveys and statistical publications for CSD in the 1990s and has been associated with CSD and DPH on a consultative basis for several years now.

The Final Questionnaire

Maui reformatted the CBHS questionnaire into its final form with special consideration for interviewing, coding, and keying the Survey data. The final questionnaire contains 53 questions three of which had two sub-questions for a total of 58 questions. The average time to complete the individual person's part of the questionnaire was about 15 minutes; the total time to complete the whole form depended on the number of persons in the household, as well as other factors.

Survey Training and Staff

With consultations with CSD and CGC, Maui developed and conducted a training program for the 2013 CBHS field enumerators, office clerks, and CSD staff. Thirty one (31) employees were hired for the CBHS: 29 of them worked as field enumerators while two of them were office clerks. In addition, three CSD staff also worked directly on the CBHS: one person, Justin Andrew, was in charge as the supervisor of the Survey. Brenda Ridep assisted in coding, keying, and cleaning the data. Tom Torres assisted in computer and network setup for the project.

All field surveyors and office staff went through an eight (8)-hour survey training sessions. The training was broken into three sessions in three days. The first day focused on properly completing the survey questionnaire. The second day reviewed completing the questionnaire and focused on field work—how to use the CNMI Housing Register and Housing Maps to locate the preselected households in the sample, logistical, and other administrative work involved in the Survey. The third day was a field trial run where each of the enumerators went out to the field, locate the houses in his/her assignment area, completed one questionnaire, returned to the Office, and had his/her work verified by the supervisor and the clerks. The two office clerks attended the same training with the field surveyors and also were trained in reviewing forms, coding, and data entry. Trainings were conducted in Saipan, Tinian, and Rota. While Maui did the direct training, CGC and CSD staffs were present in training sessions to answer questions and provided assistance.

The Primary Mode of Completing the Survey Questionnaire

The primary mode of collecting the data from each of the selected households in the CBHS was through a personal visit and interview of the members of the selected households. As stated earlier, survey takers were hired and trained to locate each of the randomly selected housing units in the sample, conduct a personal interview, and complete a CBHS questionnaire. In cases where follow-ups were necessary, telephone was also used to complete the questionnaires to minimize the cost and speed-up the follow-up process of completing forms. In all cases the first contact with each household was a personal visit; most questionnaires were completed this way, but telephone follow-up was also commonly used to complete or verify pieces of information. Telephone follow-ups were done by both field survey takers and in-house office clerks, depending on a particular situation: in situations where an office clerk can call a household and get the required piece of information, this was done; in other situations, the form was returned to the appropriate surveyor to do follow-up and complete the form.

The Tracking of Field Work

To help manage the Survey's daily operations, Maui created a tracking system in MS Access to track the progress of each field worker, the entire group, and percentage of work done. On a daily basis, an office

clerk entered completed forms into the database tracking system and reports were produced to show the progress of the Survey's field work. Survey supervisors reviewed the progress of the field work, daily, and determined necessary changes, decisions, and actions to take.

Questionnaire Review for Quality Control

The two office clerks were trained to review each questionnaire for completeness and either accepted or rejected each of the questionnaire submitted by the field surveyors. The enumerators were paid on a per completed form basis rather than per hour. To be paid, the questionnaire submitted must pass review. CSD settled on this form of payment based on past survey work experiences. At the beginning of the field work, work was deliberately slowed down to make sure that each enumerator was doing his/her job correctly before being encouraged to increase production. After the training, dates and times were set for field workers to come in to CSD for their field work assignment. As mentioned above, on the third day of training, each enumerator was given only one assignment area (AA) and one questionnaire; each went out to the field and completed that one questionnaire from within that AA; and brought the completed form back to CSD for review. Enumerators who passed the first questionnaire review were given a supply of questionnaires and enough housing units to increase their field work production in the coming days. Those who did not do so well were re-trained or assisted in their weak areas. Many of the field enumerators have worked with prior censuses and surveys with valuable past experiences doing field survey work.

Data Coding

Once a questionnaire passed the review stage, it was filed appropriately in a filing cabinet ready for coding. Three weeks into the start of the Survey coding began. A code book from the 2011 CBHS was updated and used for coding the 2013 Survey. Throughout each day, the clerks would review incoming forms, assisted field workers, and coded completed forms. A copy of the code book is available at CSD. Codes can also be obtained from the code tables in MS Access database that house the Survey data.

Data Entry

A database in MS Access was created to store the survey data. A form application was created to enter the data from the completed questionnaire into the database. Maui created the database and the form application and trained the clerks at CSD on proper data entry. The database tables and form application contained validation rules that allowed only the acceptable set of values (variable domain) into each of the fields. The validation check helped to minimize the amount of keying errors entering the database. Data entry began in August and ended on November 6, 2013.

Data Cleaning and Processing

As the forms were entered into the database, frequencies and crosstabs were produced and used to look for possible errors and/or anomalies in the database records. Queries were created in MS Access to show what appeared to be possible errors and isolate, appropriately, these set of records. After all the questionnaires were entered into the database, Maui, CSD staff, and the clerks printed out the records that looked like they could be errors and validate each of the individual values against the appropriate hard copy questionnaires.

The resulting clean dataset for the CBHS was exported from MS Access into SPSS (Statistical Package for the Social Sciences) where summary statistics for each variable was produced which are shown in the many tables under the results section of this report.

Survey's Challenges, Changes, and Remedies

Field Work Data Collection Delay and Extensions of Employment Contracts

Saipan's field data collection went fast and short. It started in July and was completed in August. Tinian and Rota's data collections were delayed for two reasons. One, personnel actions for short term employment contract for workers from Tinian and Rota took longer to process. This delay in processing the employment documents delayed the training schedule for Tinian and Rota. Training for Tinian was done on August 26th through 27th and Rota was on August 28th through 30th of 2013. Difficulty in using existing maps to locate selected houses caused delays in Tinian and a mapping expert from Saipan went to Tinian to assist in properly identifying the sampled households. It took more time than we expected to get both Rota and Tinian enumerators to complete field work for these two islands. Tinian enumerators' term of employment had to be extended one more month to give them more time to complete the field work there. Both islands completed their field work at the end of October.

Work Reassignment

Several of the field workers started but did not complete the areas assigned to them. And a couple left for a vacation towards the end of the data collection period in Saipan. In these situations, work was taken from these enumerators and reassigned to more efficient workers who completed them.

Refusals and Unavailability of Some Household Members during the Survey Period

Nine (9) household units, all from Saipan, refused or chose not to participate in the 2013 CBHS. In these situations a substitute household from within the same assignment area was enumerated instead. Also, in some case, members of the selected households were not available to complete the survey because they were off-island, bed ridden, hospitalized, or needed language translation or other reasons. There were 79 of these cases: 46 in Saipan, 29 in Tinian and 4 in Rota. In these situations, the person's demographic data were captured and included in the household level records, but no other data were obtained from these persons and they were not included in the respondents' records.

Coding Changes: Questions 18 through 24

Initially the responses to these questions were coded "0", "1", "2", "4", "98", and "99". These codes were kept and keyed into the database. After the data had been cleaned, these responses were re-coded such that "4" became "3" resulting in these set of values becoming "0", "1", "2", "3", "98", and "99".

Re-Coding: Responses to Questions 41 to 46 from "97" to "0"

Initially, all respondents who responded "none" to these questions were coded "97". When data processing began, it appeared more advantageous to code this type of response "0" for all of these questions, instead of "97". The recode was done quickly using the Update Action Query in Access. Hence, in these variables, "0" means "none".

Low Response Rates: Questions 6 through 9 and 14 through 17

The response rates to these questions seem low. This could be that, indeed, the occurrences of the use of these substances are low. It may be possible that respondents are not reporting honestly, resulting in low response. One would have to look elsewhere, may be administrative records of the Public Safety Department or other possible sources to corroborate the results of these questions.

Data Entry Delay and Extension

While form reviews and coding went well, data entry became a bottleneck in the middle to the end of the survey operation, causing additional delay in the time needed to complete the processing of the Survey.

III. THE RESULT OF THE SURVEY

NUMBER OF HOUSEHOLDS SELECTED AND THE NUMBER OF RESPONDENTS INTERVIEWED

Of the 1,680 households selected for the 2013 CBHS, 1,284 of them were completed, a response rate of about 76%. These households contained 3,925 individual persons with an average household size of 3.03 persons. Of the 3,925 persons in households, 2,492 of them were 18 years and older. The 1,680 household in the sample was just over 10% of all occupied housing units in the CNMI. The actual number of households surveyed was 1,284 or 8% of all occupied housing units in the CNMI. By island, the 987 household surveyed was about 7% of total occupied housing units in Saipan, Tinian's 147 surveyed units was about 22% of all occupied units, and Rota's 150 surveyed units was about 21% of all occupied units. For details on the number of households selected versus the actual number households interviewed in the Survey, see Table 1, below.

Table 1. The Total Number of Household Housing Units in the CNMI in 2010, the Number of Households Selected for the 2013 CBHS Sample, and the Number of Households Actually Surveyed in the 2013 CBHS

Island and Village Group	Total Number of Occupied Household Housing Units in the CNMI in 2005	Household Housing Units Selected for the 2011 CBHS		The Actual Number of Households Surveyed		Actual Surveyed as a Percentage of Total Occupied Household Units	Avg Number of Persons in HHLDs	Household Weight
		Total Number of Units	Percentage of Total Occupied Households	Number of Units (or Forms) Completed	Response Rate (Percent Completed)			
Saipan	14,709	1,268	8.6%	987	77.8%	6.7%	3.12	
As Matuis & Surrounding Areas	220	50	22.7%	40	80.0%	18.2%	2.60	5.5000

HOUSEHOLD WEIGHTS BY VILLAGE GROUPS

Household weights were calculated and used in producing the various statistics in this report. The weights were derived first by dividing the total number of occupied housing units by the actual number of units surveyed for each of the village groups. These initial household weights are shown in the last column of Table 1 above. These initial weights were then adjusted for citizenship, island, and ethnicity based on the 2010 proportions. The final weights used in producing the statistics for this report are not listed here, but are included in the SPSS data file under the variable name "HHWeight".

DESCRIPTIVE STATISTICS

In this section, each of the survey questions is summarized quantitatively: the summary consists of frequencies and other descriptive statistics on each of the variables. Some of the variables were transformed into class intervals, from their original forms, before frequencies were produced. The summary statistics for each of the variables are for the CNMI as a whole. Further statistical analysis, such as cross tabulation and/or other techniques, which are beyond the scope of this report, would be required to expose the large amount of useful information on each of the health topics contained in the 2013 CBHS dataset.

ORGANIZATION OF THE SUMMARY STATISTICS

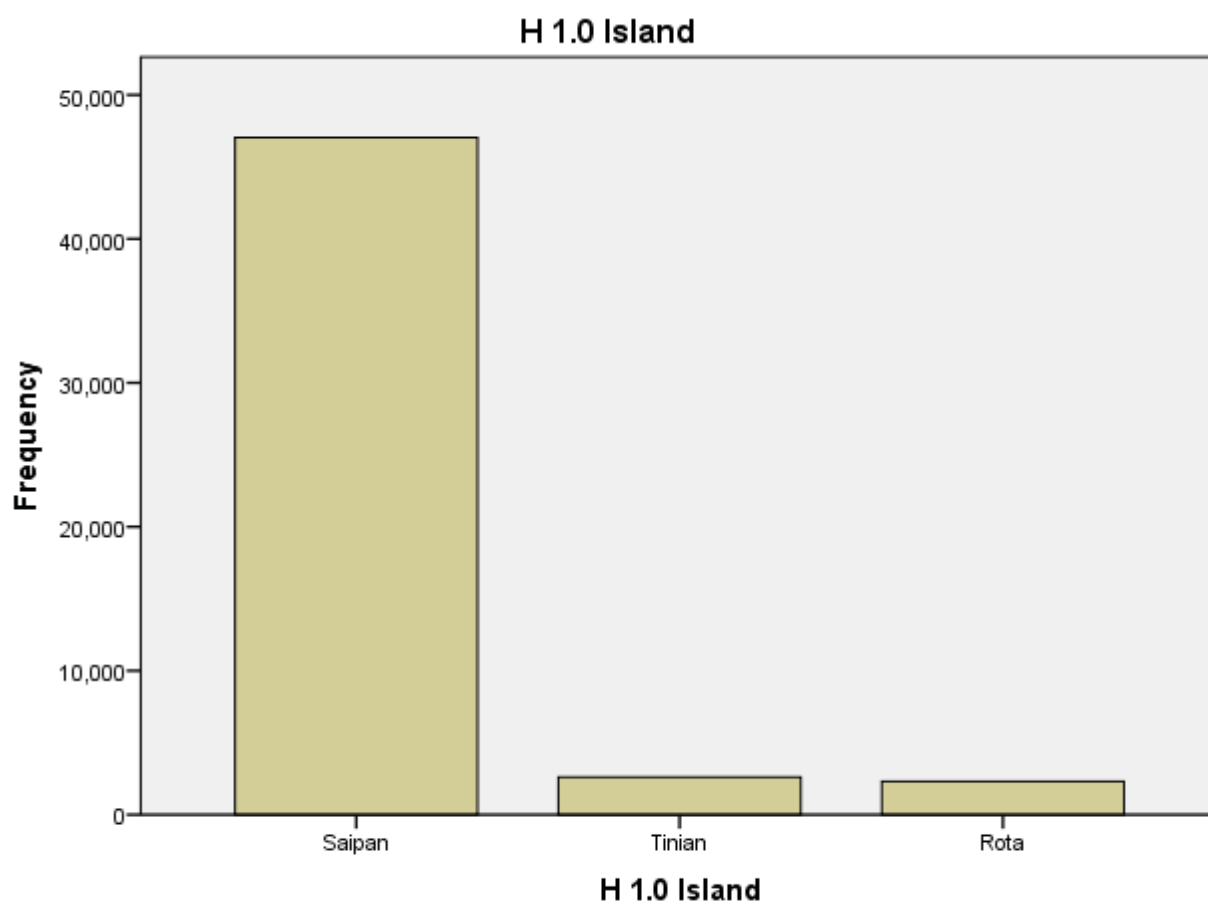

The order in which the variables (questions) appear in this section of the report follows the order in which they appear in the Survey Questionnaire. Each of the health-related variables is given a number and a label, which is very similar, if not identical, to the associated question number and question wording in the questionnaire. The reason for this parallel is for ease in cross referencing between the questionnaire and the descriptive statistics here. The summary statistics are grouped into two parts. Part I shows the summary statistics at the household level; these statistics include all persons, including less than 18 years old, captured in all households in the Survey. Part II shows the summary statistics for the 18 and older persons, representing the target population of the survey.

SURVEY RESULTS: PART I
DESCRIPTIVE STATISTICS OF HOUSEHOLDS

This part of the Results section contains descriptive statistics of the variables describing the households in the Survey. For details on each of the variables in this Part I, please refer to the outside and the inside covers of the Survey Questionnaire.
